Indian
MOTORCYCLE COMPANY

Bulletin No. SVB-159(A)

Model ME-125

Subject WIRING SCHEMATIC

Date AUGUST 21, 1974

1/2 WAVE ME-125

All ME-125's from Serial No. 1256-17430 and up have a new electrical wiring harness assembly, (P/N 13005010) and a new ignition switch (P/N 13005003).

The two new parts modify the motorcycles to conform to SVB-150. Refer to SVB-148 for ME-125's with serial No. 1256-17429 and below.

This new switch can be identified by looking on the back of the switch and locating and confirming that the switch has two (2) red/white wires coming out of it.

There are two switches that work for this wiring system. Refer to Picture #1 for one (1) type of switch and page #2 of this bulletin for the second type of switch. Both switches function the same, and plug in the wire harness the same, but are different inside.
