Subject	SEAT HOLD DOWN CLIP

REPLACING SEAT HOLD DOWN CLIP

If the old style, rivetted seat hold down clip breaks off a customer's motorcycle, it can be replaced with a new bolt-on clip, part #13004143. To replace broken clip proceed as follows:

1. Remove the seat cover and foam from the seat pan.
2. Drill out the original seat clip rivets using a 5mm (7/32) drill. Bolt in the new clip with the supplied hardware and tack weld the nuts to the seat pan. This will make the clip replaceable at a future date if failure occurs.
3. Reinstall foam and seat cover.

These clips are available on a limited, no charge basis. Simply request the quantity you need with your regular parts order.

Be certain that you tell the Parts Department that you want the clips for warranty work. Refer to this Service Bulletin.

DESCRIPTION	PART NUMBER	REMARKS
CLIP, Seat Securing	13004143	No charge item for limited time. Will be sent with mounting hardware included during no charge period only.
