

Note: If the motorcycle is equipped with "Feathaire"® suspension, be certain that each fork leg has 35 to 37 P.S.I. of air.

THE FOLLOWING RECOMMENDED BREAK-IN PROCEDURE IS PROVIDED TO ACQUAINT YOU WITH PROCEDURES THAT MUST BE PERFORMED AFTER THE SALE HAS BEEN MADE:

BREAK-IN PROCEDURE

Your Indian Motorcycle is manufactured to precise tolerances. Therefore careful break-in procedures must be followed to insure trouble free service and operation.

During the first five hours of operation, care should be taken not to submit the engine to undue stresses. Power should be applied gradually through use of the throttle allowing the engine to come up in rpm gradually, no more than half throttle opening is recommended during this period.
